

Linevera

A business line on your Android phone — without changing your carrier.

Linevera turns your existing Android phone into a second business line. Your business number rings *your* phone, your outbound calls show *your* business caller-ID, and texts and voicemail land in their own inbox — all without a separate device, a SIP app, or replacing your personal number.

WHAT YOU GET

Carrier-quality calls

Outbound calls go through your phone's carrier — not VoIP — so audio is rock solid even on a weak data connection.

SMS & MMS

Send and receive texts, send pictures, attach images to brand-new conversations. Inbound photos arrive automatically.

Push notifications

Inbound texts pop a push instantly. No app polling required, no battery drain.

Web SMS portal

Send and read messages in any browser at messages.myvoipsms.com — handy at a desk with a real keyboard.

Long-press multi-delete

Sweep multiple SMS threads at once with a long-press + tap, just like Gmail. Works on the app and the portal.

Per-user SMS rights

Admins can grant or revoke SMS for each user without touching their voice line.

Your business number on caller ID

Every business call shows your dedicated business DID. Your personal cell number is never exposed.

Voicemail with transcription

Listen inline, or read the auto-generated transcript. Each message is private to you.

Phone-contact integration

Names & photos from your phone's address book appear in the call log, message threads, and the web portal.

Signature & auto-responder

Add a signature to outbound texts; set an auto-reply for inbound (e.g. "out of office") right from the portal.

Offline cache

The Messages tab paints from a local cache instantly. Read your latest threads even when there's no signal.

No Play Store required

Direct APK download at www.jdweb.cc/linevera — install in three taps, update the same way.

WHY IT'S DIFFERENT

No SIP, no VoIP latency

Other softphones push every audio packet over the internet. Linevera bridges through the carrier, so audio quality matches a regular cell call.

One device, two lines

You don't carry a second phone. You don't port your number. Personal and business stay cleanly separated on the same device.

Built for small business

Multi-user, multi-tenant, hosted PBX. Add a user in the admin dashboard, send them a link, they're on the air in five minutes.

GET STARTED

1. Download: open www.jdweb.cc/linevera on the user's Android phone and tap **Download APK**.

2. Install: follow the on-screen prompts (the page walks customers past Android's "unknown sources" warning).

3. Sign in: with the company code, username, and password the admin provides.

4. Done. Outbound business calls, SMS/MMS, voicemail, and notifications start working immediately.
